Sahidhullah H

L2 Software Engineer | .NET, C#, React, Angular | Full Stack

Chennai, Tamil Nadu, India | +91 9789442466 | sahidhullah@gmail.com | sahidhh.github.io/portfolio | linkedin.com/in/sahidh-h | github.com/sahidhh

SUMMARY

Backend-leaning full stack engineer with 2+ years on .NET 8, C#, PostgreSQL and Azure, and React or Angular front ends. Available to join within 15 days.

TECHNICAL SKILLS

Languages: C#, Python, TypeScript, JavaScript, SQL, Java, Kotlin

Backend: .NET 8, ASP.NET Core, Entity Framework Core, MediatR, CQRS, Clean Architecture, REST APIs, microservices, FastAPI, Node.js

Frontend: React, Angular, React Native, Redux, HTML, CSS

Databases: PostgreSQL, SQL Server, MongoDB, SQLite

Cloud and tools: Azure (Blob Storage, Entra ID), AWS, Docker, Jenkins, Git, GitHub Actions, unit, integration and load testing

AI and agents: prompt engineering, LLM integration, agentic development, agent harness design

EXPERIENCE

Propel Technology Group Inc, Chennai Aug 2024 to Sep 2026

L2 Software Engineer (Aug 2026 to Sep 2026), promoted from Back End Developer (Aug 2024 to Aug 2026). Worked on a B2B tax-review platform and a healthcare and e-commerce platform.

- Moved a production backend from a layered design to CQRS and Clean Architecture (MediatR, EF Core, Unit of Work). Adding a new review tool dropped from about 2 weeks to 4 days.
- Redesigned the PostgreSQL schema for clients, engagements and five review tools, removing 6 redundant tables and duplicate client records.
- Cut reporting endpoints from about 8 seconds to under 2 with split queries and shared query helpers, and removed N+1 queries on the read side.
- Built the backend of a PDF form-comparison pipeline. A .NET API stores files in Azure Blob and tracks status, and a Python worker extracts text, compares versions and writes an LLM summary of the changes. It handles 500+ documents per cycle.
- Owned 8+ backend modules, including Entra ID authentication, IRS form version comparison, audit reporting and Excel export.
- Built the Angular side-by-side comparison screen with colour-coded changes and 10+ shared components.
- Spent several months on a microservice-based tax platform. Wrote unit and integration tests, and Python load tests that I ran against staging and UAT servers for several projects.
- Deployed builds to servers by hand and with simple Docker scripts that run steps in order. Used Jenkins, AWS and Azure.
- On the healthcare platform, designed 20+ REST APIs (orders, appointments, lab tests, payments, prescriptions) serving a mobile app, three web portals and a pharmacy back office. Query tuning and caching cut response times by about 80%.

Frontend Developer Intern, Mallow Technologies, Coimbatore Jun 2023 to Dec 2023

- Built responsive React and Redux screens for a time-tracking app and connected them to REST APIs.

PROJECTS

Job Discovery Pipeline Next.js, TypeScript, Supabase, GitHub Actions

- Scrapes six job boards twice a day, scores postings in two stages (keywords first, LLM only for those that pass) and sends one Telegram digest. A notifications log gives at-most-once delivery. Live at job-scraper-liart.vercel.app.

pi-lean and pi-fleet TypeScript, Node, systemd, micro-VM sandbox

- Sandboxed coding-agent runner: agent tools execute in a micro-VM on a throwaway copy of the project, and I review one exported patch. Prompt and tool tuning cut input tokens 40 to 70 percent, and a 6-task eval passes 12 of 12 runs.
- Scheduled agent jobs on a home server, run in sandboxed systemd units on free LLM models. Every run must pass a scripted check before it counts as done.

taskfs Python, Kotlin, Syncthing

- Task manager built on plain files synced across laptop, home server and phone. Includes a CLI, a terminal kanban board, an Android client and a field-level conflict merger. Migrated 104 tasks from Notion and verified each one.

MedStock Cloudflare Workers, D1, GitHub Actions

- Medicine inventory app in daily use by a family member since October 2026. Every change is audit logged, and a nightly backup passes only if integrity and row-count checks hold.

EDUCATION

B.Tech, Information Technology, Karpagam College of Engineering, Coimbatore 2020 to 2024
