Sahidhullah H

Backend Developer — .NET

Chennai, India (IST) | Open to Remote — Worldwide | Available for US/EU hours overlap | Full-time or Contract sahidhullah@gmail.com | linkedin.com/in/sahidh-h | github.com/sahidhh

SUMMARY

Backend developer (2 yrs) building B2B platforms with .NET, CQRS/Clean Architecture, Entity Framework Core, PostgreSQL, and Azure. Migrated a production tax-review platform to Clean Architecture and cut reporting endpoint response times from ~8s to under 2s.

EXPERIENCE

Propel Technologies — L2 Software Engineer (promoted from Backend Developer, 2025) Chennai, India | Aug 2024 – Sep 2026

B2B tax-review platform (.NET, PostgreSQL, Angular, Azure)

- Migrated the backend from a layered design to CQRS-based Clean Architecture using MediatR, EF Core, and the Unit of Work pattern, cutting the time to add a new review tool from ~2 weeks to ~4 days.
- Redesigned and normalized the PostgreSQL schema modelling clients, engagements, and 5 review tools, removing 6 redundant tables and eliminating duplicate client records.
- Built 8+ backend modules covering Azure Entra ID authentication, IRS-form version comparison, year-over-year comparison, summary and admin audit reporting, Excel export, activity tracking, and bookmarks.
- Optimized EF Core data access using split queries and shared query helpers, removing N+1 patterns and reducing reporting endpoint response times from ~8s to under 2s.
- Built the form-comparison pipeline: a .NET REST API uploads PDFs to Azure Blob Storage and tracks processing status, then triggers a Python worker that extracts and compares forms and persists the differences to PostgreSQL — processing 500+ documents per review cycle.
- Developed the Angular interface for the comparison tools, including a side-by-side view that colour-codes changes, comparison side panels, a dashboard stats banner, and 10+ shared components (collapsible lists, dropdowns, modal overlays).

Commercial healthcare ecosystem (React Native/Expo, React + Vite/TS, .NET, PostgreSQL, Python)

- Worked across an end-to-end healthcare platform: patient app for Android and iOS, web portals for healthcare data admins, receptionists and doctors, and a pharmacy back office — one .NET backend and one PostgreSQL schema behind all of them.
- Built doctor scheduling with a custom calendar and role-based access control separating admin, receptionist and doctor views; in-app e-commerce and lab-test booking.
- Pharmacy portal: stock management, order processing, payments, prescription review, bill generation and delivery-partner setup; Python services for document processing and generation.
- Designed 20+ REST APIs, reducing response times by ~80% through query optimization and caching.

Mallow Technologies — Frontend Developer Intern Coimbatore, India | Jun 2023 – Dec 2023

- Built responsive interfaces for a time-tracking web application using React.js and Redux, with reusable components for shared layout and state.
- Integrated frontend components with backend REST APIs, aligned on contracts with designers and backend developers, and participated in code reviews.

PROJECTS

Job Discovery Pipeline — TypeScript, Next.js 15, Supabase (Postgres), GitHub Actions
github.com/sahidhh/job-scraper

- Scrapes six job boards twice daily on GitHub Actions, normalizing every source into one schema with a stable ID for deduplication.
- Two-stage scoring (keyword gate, then LLM only above threshold) persisted per (job, role); one Telegram digest per run with at-most-once delivery via a notifications log. **Profile Router** — TypeScript, Node.js, JSON Schema github.com/sahidhh/profile-router
- Routing layer for an AI coding agent that classifies each prompt and selects the appropriate model and toolset, with zero LLM calls in the classifier itself.
- Reduced inference spend by roughly 60% by routing simple prompts to cheaper models; covered by unit and regression tests.

TECHNICAL SKILLS

Languages: C#, Python, TypeScript, JavaScript, SQL

Backend: .NET, .NET Core, ASP.NET Core Web API, CQRS, Clean Architecture, MediatR, Entity Framework Core, REST APIs, Node.js

Databases: PostgreSQL, SQL Server, SQLite

Cloud & DevOps: Microsoft Azure (Blob Storage, Entra ID), Docker, Git, GitHub Actions, Postman

Frontend: Angular, React.js, Redux, HTML5, CSS3

Other: PyMuPDF, LLM API integration

EDUCATION

B.Tech, Information Technology — Karpagam College of Engineering, Coimbatore | 2020 – 2024
